OUR ROOTS.

La Nordica has been Warming Life for over 50 years.

There is work and there is passion. There is a family and there is an ideal. There is optimism and the desire to change, but always in the footsteps of one's own tradition. There's all this, and even more, in a La Nordica product. This is well known by the many customers who rely on this large group that has become synonymous

with warmth, reliability and safety. More than fifty years have passed since Silvano, Giannino and Giorgio Dal Zotto began this adventure that today the family carries on with the spirit of our times, investing in technology and innovation. From the 1960s to the present, the production of stoves, cookers, wood-burning and pellet fireplaces and boilers has transformed

itself into a great industrial reality, but the love and dedication of the beginnings have remained unchanged. A journey that in the last five decades has led the Group to positioning itself as a leader in an international market in more than 50 countries around the world, with an offer of over 200 Hi-tech Made in Italy Products for the production of energy for domestic heating using biomass. A history of quality

and continuous renewal, attested by the most up-to-date international certifications, puts the Group's proposals at the forefront of the sector.

**Our history is at the roots
of our future.**

STRENGTH.

+200 Innovative products

Over 200 articles for the production of energy for domestic heating: wood-burning and pellet stoves, fireplaces, cookers, thermo-products and boilers. A proposal of quality and continuous innovation that puts the Group at the forefront of the sector.

5 Production Plants

The La Nordica-Extraflame Group has reached a prestigious international position thanks to 5 production plants, all of them strictly Made in Italy.

+50 Countries in the world

The La Nordica-Extraflame sales network can supply its products in over 50 foreign countries.

7 Thematic classrooms

In the Training Centre, equipped with 6 thematic classrooms, technicians and salespeople undergo constant training, to be able to meet all the needs of the end user.

+400 Technical Assistance Centres in Europa

To ensure rapid and timely interventions on products, over the years the La Nordica-Extraflame Group has created and consolidated on the territory a widespread network of qualified and authorised technicians, constantly trained on the innovations on the products and services and in direct contract with "Customer Service".

WOOD-BURNING

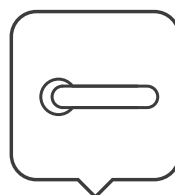

Hearth in Nordiker

La Nordica uses a special material called Nordiker for the production of hearth walls refractories.

Post combustion

The combustion system developed by La Nordica allows, due to a secondary/tertiary air system, a post combustion which significantly reduces emissions.

Doors in cast iron

The high-quality cast-iron doors are made to last and ensure perfect sealing at all times.

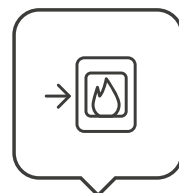

Automatic safety device

It is a safety device created to quickly reduce water temperature, according to rules in force. DSA valve not included.

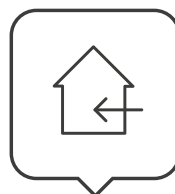

Glass cleaning system

A system of pre-heated air which removes any deposit from the fire-door glass.

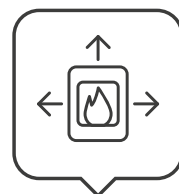

Direct outdoor air intake (BBC)

Air intake system which draws fresh air from outside directly into the adjust system combustion regulation of the firebox of the appliance.

Outdoor air intake (ASC)

A particular connection system which allows to introduce air from the outside into the pre-heated environment around the fire-box.

Radiant system (PRS)

High efficiency Heat exchanger system

UL-C SERIES

The quality and solidity of the materials, the harmony of the lines, the care in the realisation and the safety in use. With this in mind, “La Nordica” wood-burning products are born.

The La Nordica appliances of the UL-C series are solid-fuel, i.e. wood, stoves and cookstoves specifically designed to fulfill all the safety requirements required by the market. In particular, these products have been certified to the test standards UL 1482 and ULC S627 for the US and Canadian markets, respectively. Installation compliance is given by following the requirements of the test standards together with the national installation codes for each country.

TECHNOLOGY

N.B. Enameled cast iron, when used correctly, has almost an unlimited life and requires minimal maintenance.

Le Cucinotte

Le Cucinotte are more than just cookware: they are custodians of stories and traditions, a precious piece of sharing and authenticity.

With a design that evokes the charm of the past and cooking performance that meets the demands of today, each dish reflects our commitment to quality and attention to detail. The glass-based enamel finish adds not only beauty, but also unparalleled versatility of use, ideal for food preparation and storage.

Perfect cooking everywhere.

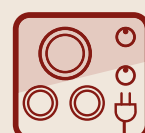

Designed for every type of cooker, including induction, and perfect for any cooking method, Le Cucinotte make for even and controlled cooking at any temperature. Functional but also aesthetic: their elegant design also makes them ideal as serving plates to keep food hot or cold during table service, offering maximum versatility for every occasion.

CERTIFICATES

	ETL (Electrical Testing Laboratories) – Product Safety Approval. The ETL Listed marking certifies that the product has been tested by an independent and accredited laboratory (Intertek), complying with the minimum safety requirements, recognized and accepted in the same way as the UL and ULC marking, to be sold and distributed in the territory of North America.
---	---

“The La Nordica appliances of the UL-C series are solid-fuel, i.e. wood, cookstoves specifically designed to fulfill all the safety requirements required by the market. In particular, these products have been certified to the test standards UL 1482 and ULC S627 for the US and Canadian markets, respectively. Installation compliance is given by following the requirements of the test standards together with the national installation codes for each country.”
